Thursday, December 2, 2021 12:05 am PST by Juli CloverIn addition to naming its editorial choices for the best apps and games of 2021, Apple today shared the leaderboards for the most downloaded free and paid apps and games in the United States in 2021. The most downloaded free iPhone app was TikTok, followed by YouTube, Instagram, Snapchat and Facebook. The top paid iPhone apps included Procreate Pocket, HotSchedules, The Wonder Weeks, and Touch... Installing a printer on a Mac is usually a simple task. You shouldn't do much more than connect the printer to your Mac, turn on the printer and then let your Mac automatically install the printer for you. Occasionally, the automatic installation process does not work, usually with older printers. In this case, you can use the manual printer installation method. The instructions in this article apply to Macs running OS X Lion (10.7) and later. Your Mac will detect any compatible printer that you connect to it with a cable. You will add it via System Preferences. Charge the printer with ink and paper, connect it to the Mac using a USB cable, and then turn on the printer. Launch System Preferences on your Mac by clicking its icon in the Dock or selecting it from the Apple menu. Click the Printers & Scanners icon. If the printer is listed in the printer list sidebar of the preferences pane, highlight it and display its status. If it says inactive, the Mac sees the printer even if it's not in use. It's all right. If the printer is not in the list, click the plus (+) button at the bottom of the printer list to add a printer. Select the Default tab in the Add window. Your printer should appear in the list of printers connected to your Mac. Click on the printer name and the fields in the part of the Add Popular dialog with printer information, including name, location and driver, which the Mac automatically selects. By default, your Mac automatically selects the driver. If your Mac can find a suitable driver The printer shows the driver's name. If your Mac fails to find a suitable driver, click on the drop down menu Use and choose Select Software from the drop down list. See the list of printer drivers available to see if there is one suitable for your printer. Otherwise, try a generic driver, if available. Select a driver from the list and click OK. Click the Add button to complete the installation. If you still have problems and you have manually selected a generic driver for the printer, try another driver or go to the printer manufacturer's website and download a suitable printer driver.
