Marissa Mayer was the first CEO of Yahoo, until selling the company's internet assets to Verizon. Previously Google, Marissa Mayer led the product management and engineering efforts of Google's local, mobile, and context products including Google Maps, Google Maps for Mobile, Local Search, Google Earth, Street View, Latitude and more. At 36 she was also the youngest member of Google's executive operating committee. During her 12 years at Google, product management and design efforts for Google web search, images, news, books, products, toolbar and Kioop started at Google in 1999 as Google's 20th employee and first woman engineer. Marissa's contributions have been recognized by numerous publications including the New York Times, Newsweek and BusinessWeek. Fortune mag named her for the past 3 years on their annual Most Powerful Women's list, and she was the youngest ever to appear on the list. Marissa was honored by the New York Women in Communications, Inc. with a Matrix Award. She also been named a Young Global Leader by the World Economic Forum and Woman of the Year by Glamour Magazine. Marissa, seen board of various non-profits, including the Smithsonian National Design Museum, the New York City Ballet, San Francisco San Francisco Museum of Modern Art. Prior to joining Google, Mayer worked at the UBS research lab (Ubilab) in Zurich, Switzerland, and at SRI International in Menlo Park, California. Marissa received her B.S. in Symbolic Systems and her M.S. in Computer Science from Stanford University. For both degrees, she specialized in artificial intelligence.

This is the result of being 'over discharged'. (From: YouTube/DIY Headphones Repair) Pry the battery out of the casing. These solutions are super easy, and they can save you a few bucks. Then, remove the small cover that's sitting on top of the speaker. This can be a fairly technical process, so for an in-depth walkthrough, follow this video guide. This solution will require some technical skills, and may require the assistance of a professional in order to do this correctly. However, they're also very weak and liable to damage over time. All you'll need is a cloth, some rubbing alcohol, and a can of compressed air. But, before diving into a few brand-specific solutions, here are some general tips that you can try to resolve the problem. Not only this, but when you go to plug them in to charge, the charging light isn't turning on. Once the case is completely charged, remove the earbuds and then insert them back into the case. Removing the battery. (From: YouTube/Central Sound) Remove the sticker from the back of the battery and place it back into position. Now that they're back up and running, you'll be able to stream music, watch movies, and listen to podcasts just like before. Let's take a look at a few of the most common of them. To reset the charging case, follow these steps: Put the earbuds in the case and plug the case in to charge completely. (From: YouTube/DIY Headphones Repair) Reconnect all necessary components in the order that you disconnected them and seal the headphones. For Logitech Logitech charging issues are commonly caused by a faulty micro USB connector. (From: YouTube/Joe's Gaming & Electronics) Remove the cable and turn the headphones on after waiting a minute. Most headphone batteries are Li-Ion (A.K.A. Lithium-Ion) and contain copper components. Get into a habit of placing them back in their case when you're finished with them. This problem becomes increasingly more concerning when they're an expensive pair of headphones that you've invested a lot of money into. Remove the touch panel. Inspect the charging port of your headphones for any damage like bent connectors or bent metal. These batteries have a limited amount of times they can be charged. As a good rule of thumb, keep the battery percentage within the "magic ratio" of 20% to 80%. Even if the battery isn't fully charged when you take them off, they should have received an adequate enough charge in that time. Plugging into the Bose headphones. (From: YouTube/Central Sound) Use a prying tool to remove the battery. Keep your True Wireless Earbuds in the charging case when not in use When you're not using your earbuds, keep them in their case. Anything above or below this can degrade the lifespan of your battery. Giving the case a reset can resolve the issue for you. If there is debris blocking the headphones from making contact with the charging pins inside the case, they won't charge. If the headphones don't work and will not accept a charge, you can try changing the battery inside the headphones. The delicate wires inside the cable can become faulty with continued use. This is usually the result of constant pulling and twisting which cause tension and damage the wires inside. Before going further, make sure to try plugging your headphone charger directly to a power outlet. (From: YouTube/Central Sound) For AirPods AirPods rely on their case for charging. To clean your AirPods and their case properly, follow these steps: Start by cleaning the charging port with a soft-bristled toothbrush to ensure the case itself can be charged. The batteries inside your wireless headphones degrade over time, with most lasting between two to four years before you start to experience a decrease in performance. Make sure that each earbud flashes red when inserted. Plug the headphones back in and see if the headphones start to charge. With time, the more they are charged, the amount of charge the battery can hold is decreased. Re-applying the adhesive sticker. Disconnecting the battery. (From: YouTube/DIY Headphones Repair) Insert the new battery and connect it. In fact, some headphone brands require unique ways of addressing this problem. As each pair of headphones is different based on the brand, solutions for each brand will also differ. Installing and connecting the new battery. Charging wireless earbuds (From: Pexels) There are various possible reasons why your headphones may not be charging. (From: YouTube/AppleToolBox) Next, use a cotton swab to gently clear away any debris found at the bottom of where the AirPods are housed and charged. Cleaning the connectors inside the case. Conclusion Just because your headphones no longer charge doesn't mean they're at the end of their life. Batteries that have been left without a charge for a long time can stop working. If you didn't have any luck with the previous solutions, let's move onto more targeted solutions for your situation. Charge directly to a power outlet and not a USB hub USB hubs, while useful, can often be insufficient in charging your headphones. (From: YouTube/Central Sound) Snap the casing for the speaker back into place. There may be a problem with the charging port Your headphones may not be accepting a charge because the charging port isn't working correctly. Just as there are various possible reasons for why your bluetooth headphones won't charge, there are also various possible solutions. This could be at no fault of your own, as all electronic devices have a natural lifespan. Luckily, in most cases, they're very inexpensive to replace and widely available. Check if the charging port is loose or damaged Much like the case of a loose headphone jack, a loose charging port can also result in many frustrating issues. Removing the battery from the headphones. For Beats Beats headphones use Lithium-ion batteries. All of these problems can prevent your charging cable from fully connecting with your charging port to transfer the necessary power for charging. If this is the case for you, make sure your headphones are positioned properly so that they can accept a proper charge. Check out these solutions to get them back up and running again! You've picked your headphones up to listen to some music and find that they won't turn on. Fixing this problem at home can be challenging as it requires the speaker piece to be removed and dismantled. Avoid bending it and putting too much tension on it, and wrap it properly before storing. (From: YouTube/DIY Headphones Repair) Flip the headphones over and remove the back cover. Removing the headphone casing. Don't throw them away just yet. Make sure they're properly seated on the charging stand or case Some headphones aren't charged through a cable directly, but instead through a stand or case that has a cable connected to it. Today, we'll cover the reasons why your headphones won't charge and how you can go about getting them back up and running again. With the lid open, plug the case into a power source. This could be the result of corrosion, faulty connectors, or foreign objects blocking the port. Luckily, there are some fixes you can try yourself before looking at your other options. A good rule to remember is "pull the plug, not the cord". Anything outside of this range can affect how well the battery supplies power to the headphones. The last thing you want is to discard them and fork out another couple hundred dollars on a brand new pair. This can be the result of a faulty USB hub or because the USB hub can't provide enough power to charge the headphones enough. With a few tweaks and perhaps a new battery, you can breathe new life into your otherwise lifeless headphones. Over time, the action of plugging in the charging cable and removing it will gradually weaken the 5-pins inside the charging port. If the above steps didn't work for you, try updating the firmware of the headphones. If neither of the above solutions worked for you, it's time to take a more hands-on approach and replace the charging port on the headphones. Installing the new battery. This means that older headphones are more susceptible to a burned-out battery, which results in the headphones either not holding a charge or not charging at all. Do a hard reset Doing a hard reset can solve many problems, including headphones that aren't charging. To begin, try the following steps: With your headphones powered on and unplugged, hold the power button for 30 seconds until the headphones are powered down. Anything outside of this is excessive. If a battery has been over discharged, there's a low chance that the battery can be charged again. Also, make sure that the port itself isn't loose when you touch it, as this could be a sign that the connectors have detached from the headset. This is because, over the years, batteries start to form an internal crystalline buildup. Putting the casing back on. If you want to give this a try, follow this video guide for an in-depth walkthrough. But, if you've only used them for a few short weeks, then they may have been defective from the start. Pulling from the cord can damage the delicate wires inside the cable itself. We'd love to hear about your experience! Let us know in the comments below. And, it can damage the pins inside the charging port if the cable is removed with too much force. See if there are any debris in the port Debris in the charging port can block the proper charging connection. Try a different charging cable As mentioned earlier, charging cables house very delicate wires that can break with too much tension. If they're just sitting around, this causes unnecessary battery drain. This issue usually subsides over time with multiple charging cycles, so it's recommended to use your headphones regularly until the light synchronizes with the battery. It's hard to tell if a cable is broken, as a lot of the time the damage is internal. After the battery level LED light shows after 3 to 5 seconds, close the lid and allow the earbuds and the case to charge for another 2 hours. Removing the outer shell of the speaker. (From: Youtube/viantant5) Clean around the charging port and as much as you can inside To clear out the rest inside the port, use the can of compressed air to push any remaining debris out Be careful when cleaning the interior of the charging port, as the electrical connectors inside are very delicate and can be broken if too much force is applied. Be gentle on the USB charging cables If you have a bad habit of yanking the cable from your headphones, it's time to stop. To fix this, you can replace the battery inside your headphones. For Sennheiser Sennheiser headphones can occasionally experience a glitch where the LED indicator light may flash or remain on, even after charging. (From: YouTube/DIY Headphones Repair) Peel the sticker away from the battery and the cable that connects the battery to the headphones. In most cases, cleaning the port is super easy and can be done in no time. Removing the casing. Using the USB charging cable, plug the headphones back in and wait for 5 seconds. These crystals increase electrical resistance and gradually lower the amount of charge that the battery can hold after some time- usually after around 2-4 years. But, if you are confident in fixing the problem yourself, check out this video for instructions on how to do so. But, this depends on how much you use your headphones and how you take care of them. To troubleshoot the battery inside your Sony headphones, try following these steps: Carefully remove the earpad from the right side. Did any of the solutions in this article work for you? If this doesn't work, you can move onto replacing the battery entirely. (From: YouTube/Central Sound) Gently remove the connection for the battery. To remedy this, clean your AirPods regularly. (From: YouTube/Central Sound) Place the new battery on the adhesive sticker and reconnect the battery. These batteries are popular for their high energy density. To rule out whether the charging cable is the problem, try charging the headphones with a different cable. Take care of your charging cable and it will last a lot longer. Bluetooth headphones connected with mobile phone To ensure the batteries in your headphones remain healthy, there are proactive steps you can take to extend their lifespan and avoid charging issues. Cleaning the AirPods. The actual process for performing a hard reset can vary from model to model, but you can check out our full guide on how to reset your headphones to get it done without much fuss. This also helps keep them in one place so that you don't lose either of them. Own a pair of Bluetooth headphones that won't charge? If you leave your headphones drained for weeks without charging, it can cause the copper to dissolve and result in unwanted chemical reactions. If the headphones haven't been charged for a long time, try keeping them plugged in for a few hours. (From: YouTube/DIY Headphones Repair) Remove the four screws around the speaker. This means that although they're small, they can hold a large amount of charge. These usually lead to dendrites that can cause a short circuit inside the battery. This can take up to two and a half hours for them to charge completely. Because of this, it's recommended that you seek out the services of a professional to avoid further damage. The charging cable is faulty Charging cables are a necessary companion to your headphones. (From: YouTube/DIY Headphones Repair) For Jabra Jabra earbuds in their charging case. For Sony To fix an issue with your Bluetooth wireless Sony headphones, you can remove the battery and plug it back in. (From: Youtube/DHRME) If your Jabra earbuds either won't charge or cannot hold a charge, it could be an issue with your charging case. (From: YouTube/AppleToolBox) For Bose If your Bose headphones are having some difficulty charging, there are definitely some solutions you can try to resolve the issue. Long story short, discharging too much is just as damaging as over-charging your headphones. Removing the four scrws. Use a microfiber cloth to clean the AirPods themselves. Here's how you clean your headphones' charging port: Lightly dampen the cloth with some rubbing alcohol Applying rubbing alcohol. Avoid overcharging Believe it or not, keeping your headphones at 100% all the time can actually be bad for their health. To do so, follow these steps: Remove the casing outside of the speaker to expose the battery. Re-connecting the headphones. In general, headphones only need two to three hours to reach a full charge. If there is visual damage to the cable like exposed wires, you can try repairing the cable yourself. Keep away from hot or cold temperatures Although it's not often given much thought, batteries actually have a preferred temperature for operation. For a battery to perform optimally, it should not be exposed to temperatures higher than 25°C or lower than 0°C.
