Indoor Unit Operation Mode Display The mode of the indoor unit is indicated by the presence of icons such as "Cool", "Heat", "Vent", "Fan", "Dry", or "Auto". The Airflow Rate symbol displays the set airflow rate, while Airflow Direction is displayed when swinging directions are set. Temperature settings are shown. The air conditioner is turned on, and "Setback" indicates lower temperatures for later use. Defrost and hot start icons appear during operation. Refer to the Operation Manual of the Heat Reclaim Ventilator if you see the Ventilating Operation symbol. Error messages, such as "This function is not available", are displayed when attempting an unsupported operation. Contact Daikin's technical support at for assistance. Messages like "Quick Start" or "Time to clean filter" inform users of specific maintenance requirements. The Ventilation/Air Purifying symbol indicates activation, while the Energy Reclaim and Bypass symbols show current ventilation mode. Other icons include: - Key symbol indicating key lock setting - Centralised Control display for systems managed by centralized equipment - Changeover Under Control (VRV only) to restrict remote control eligibility - Setback symbol when air conditioner is turned on under setback control - Timer Disabled/Reset Clock symbol when clock needs resetting - Clock displays 12/24 hour time Given article text here "Understanding Your Daikin Air Conditioner Remote Symbols: A Guide" Congratulations on your new Daikin air conditioning system! To run it efficiently and effectively, knowing the most commonly used remote symbols can be incredibly helpful. If you're finding it overwhelming to decipher the various settings, this guide is for you. Our team has put together a comprehensive guide to help you understand your Daikin air conditioner remote symbols. We've covered the most common icons and buttons you'll encounter on your system, but if there are any missing or different models, don't panic. You can always check your user manual or consult with local air con experts at HunterCON. Let's dive into the most essential symbols to get you started: - ON: Your system is currently running. - Automatic Mode (A with four arrows): Your system cycles on and off to meet the temperature setting. - Dry Mode (Box with two raindrops): Reduces humidity in the air. - Cool Mode (Snowflake): Lowers the temperature in your space. - Heat Mode (Sunshine): Increases the temperature in your space. - Ventilation Mode (Fan blades): Aerates the room accordingly. - Temperature Setting (Thermometer): Displays the set temperature. - Quiet Mode (Tree and moon): Lowers internal fan speed for a more peaceful environment. - Fan Speed (Various fan sizes): Indicates how high or low you've set the fan speed, with larger size indicating higher setting. - Powerful Mode (Human flexing): Forces the machine to run at maximum speed for 20 minutes. - Econo Mode (Down arrow with line): Limits power consumption and changes noise level. - Weekly Clock (Weekly clock): Allows you to program day of the week and time for your system to run. - Sleep Mode (Moon and stars): Sets preferences for nighttime operation. - Turbo Mode (Fan in a circle): Runs the unit at full capacity. By understanding these symbols, you'll be better equipped to manage your Daikin air conditioner and keep your home cool during Sydney's warmest months. Check out our other resources for more information on air conditioning costs, types, pros and cons, heat pumps, and power usage. Daikin Air Con Programming: A Guide to Balancing Cooling and Savings Daikin air con units offer a range of modes to optimize performance based on specific needs. To achieve a balance between cooling temperatures and energy efficiency, consider the following programming strategies: Setting a sleep mode can help reduce energy consumption during periods of low activity, while maintaining a minimum temperature for unexpected heatwaves. Daily programming cycles can also enhance system efficiency, such as turning on the unit before family members arrive home from work or school. If your remote stops working, try replacing batteries and resetting the system. If issues persist, check user settings to ensure compatibility with specific fan settings in certain modes. If problems continue, it may be necessary to replace the faulty remote. HunterCON air con specialists can provide assistance with programming and remote replacement options. When purchasing a new Daikin system from HunterCON, technicians will guide you on using each feature and programming your air con for seamless operation. With a 5-year warranty on installation and manufacturer-provided warranties, homeowners can enjoy peace of mind knowing their unit is reliable. To discover more about HunterCON's services or air conditioning, call 02 8283 1105 today. Since the 1950s, Australians have utilized air conditioning for cooling and heating their homes, with technology advancing significantly. There are three primary types of air conditioners: split system, ducted, and portable. All have remote control capabilities, including some with smartphone technologies, allowing setting changes at the touch of a button. Daikin air conditioner remotes display various symbols depending on the type and model. For split systems, press once to turn on and again to turn off. Once on, the system is active. Pressing consistently cycles through operation modes like automatic, heating, cooling, and drying. Automatic mode regulates room temperature by increasing or decreasing cooling/heating until the set temperature is reached. Cooling mode decreases humidity, ideal for tropical hut not hot days, such as after rain. Heating mode warms the room to the desired thermostat setting. The recommended temperatures vary by location but following guidelines can save on power bills. Fan mode runs continuously without changing temperature or humidity levels, best used when these are at acceptable levels. Pressing the fan speed button toggles between low, medium, high, and auto. This mode combines with heating, cooling, and drying modes. The powerful operation mode quickly cools or heats a room in as little as 15 minutes. Econo mode saves energy when using other power-consuming appliances. •Unit operates in quiet mode when activated by pressing symbol button. •This operation decreases outdoor unit noise level, ideal for nighttime use. •Pressing symbol button activates operation. •Mode means system adjusts airflow direction to cool/heat room more effectively. •Intelligent eye operation activated by pressing symbol button. •Mode detects human movement; if no one in room for 20 min, changes to energy-saving mode. •Automatic vertical swing mode activated by pressing symbol button. •Mode stops/starts vertical louvre movement and sets desired up/down airflow direction. •Automatic horizontal swing mode activated by pressing symbol button. •Mode stops/horizontally starts left/right airflow direction movement. •Activated by pressing symbol button. •Mode uses technology to decompose allergens and unpleasant odors. •Temperature control activated by pressing up/down buttons. •Buttons allow increasing/decreasing thermostat temperature in various modes. •Ducted Systems - press button to start/stop air conditioner operation. •Indicator turns red when air conditioner is operational. •Centralised Control Indicator symbolizes air conditioner control from optional centralised panel. •Heat Reclaim Ventilation/Air Cleaning symbol indicates unit operation, recovers heat energy lost through ventilation, maintaining comfortable environment and reducing load on system and conserving energy. •Fan mode: fan runs continuously, compressor off; no change in room temperature/humidity levels. •Dry mode decreases humidity in room, ideal for tropical weather with low temperature. •Auto mode regulates room temperature, increasing/decreasing cooling/heating until desired temperature is achieved. •Cool mode cools room to set temperature on thermostat; recommended temperature depends on location, following guidelines can help save power bills. •Heat mode heats up room to set temperature on thermostat. The temperature you should set for heating depends on where you live, but following these guidelines can help save money on your power bills. The device has a microprocessor that indicates when a fault condition occurs. The programmed stop and start times are shown by symbols and numbers. You can adjust the fan speed to high or low using this display. The symbol shows if the air filter needs cleaning. If ice is building up, it will flash on the screen. When running multiple units, some features might not be available, but even if one unit has it, the message won't show up. To set a timer stop or start, press and hold the button twice. For service technicians, there's an inspection/test operation button. You can increase or decrease the program stop/start time using the up or down arrow buttons. Similarly, you can adjust the room temperature by pressing on these arrows. References to manufacturer guides explain what each symbol means. The operation mode is displayed as "Cool," "Heat," "Vent," "Fan," "Dry," or "Auto." The indoor unit of a Daikin air conditioner displays specific messages for various reasons, including operational status, maintenance requirements, and system settings. These messages are displayed temporarily when an operation button is pressed or when certain functions are activated. For instance, if none of the indoor units have their corresponding function, the message "Error: Push Menu button" will appear. If an error or warning is detected, the message "Warning: Push Menu button" will display, and users should contact Daikin's technical support for assistance. Additionally, messages like "Time to clean filter", "Time to clean element", and "Time to clean filter and element" are displayed when the air conditioner requires a filter or element cleaning. Users can find helpful videos on how to clean their Daikin filters by visiting their YouTube channel or contacting a local Daikin Specialist Dealer. Other messages, such as the Ventilation/Air Purifying symbol, indicate specific system settings, including the current ventilation mode and whether an Air Purifying unit is in operation. The key symbol indicates that the key lock is set, while the Centralised Control symbol displays when the system is managed by centralized control equipment. The Setback symbol appears when the air conditioner is turned on under a setback control, and the clock displays 12/24 hour time when it is set. Finally, the Timer Disabled/Reset Clock symbol is displayed when the clock needs to be reset, highlighting that the Schedule Timer function will not work unless the clock is reset.
