## World physical map oceans

We humans can spend most of our time on the ground, but we live in a world dominated by salted water, with the ocean covering 71% of the earth's surface. The geographers divide the ocean of the globe into nominated regions, and the smallest of these is the Arctic Ocean. Even the smallest of the oceans in the world is very vast. Stretching for about 5.4 million square miles (8.7 million kilometers), the Arctic Ocean measures about 150% larger than North America. It is located in the polar region of the northern hemisphere and is almost completely surrounded by the continents of Europe, Asia and North America. Frigid conditions maintain the arctic ocean partly covered throughout the year and entirely covered in winter, although the growing global temperatures have led to a greater fusion of this arctic marine ice. The Arctic Ocean is not only 10 times smaller (it is 10 times smaller than the Pacific Ocean), it is also the most superficial. The average depth of the ocean, according to the national oceanic and atmospheric administration, is 2.3 miles (3.7 kilometers) or about 12,100 feet. The average depth of the Arctic Ocean, meanwhile, is much less deep - about 0.65 miles (1.04 kilometers) or 3,407 feet. This is how water sloshing in a children's pool compared to the deepest regions of the Pacific Ocean, which were measured at about 6.85 miles (11 kilometers), or 36,200 feet, deep. The relatively small dimensions and the depth of the Arctic Ocean have conducted some to resist the classification as an ocean, instead referring to it as part of the Atlantic Ocean called the Arctic Mediterranean Sea or simply the Arctic sea. The seas are considered smaller parts of oceans that are partially enclosed by Land.it can seem unusual that some scientists would challenge us if a water body is an ocean, but the debate around the oceans of the world extends beyond the Arctic. Historically, the global community recognized four oceans: the Atlantic, Pacific, Indian and Arctic oceans. In 2000, the international hydrographic organization (IHO), added a fifth: the Southern Ocean. This ocean, also called the Antarctic Ocean, surrounding the Antarctica and constitutes the southern waters on the ground, below the latitude of the south of 60 degrees. The addition of the southern ocean, while generally accepted, has not yet been ratified because not all IHO members have officially accepted the parameters that define the southern ocean as a fifth ocean. So how many oceans are there À ç â, ~ "four or five? For now, the most sure answer can be a time, technically, all the oceans of the world are in fact connected as a single, vast body of salt water. There are no 'It is a doubt that physics occupies a unique place among the sciences. The Nobel Prize in Physics is assigned before others who is in line with the role of the field as the cornerstone of science. In its theoretical expressions borders with mathematics Pure and even philosophy as great thinkers contemplate the existing worlds within intermediating dimensions and beyond our current time of continuity of continuum.physics receive incredible funding and resources. Studying physics offers its students a myriad of choices of Government research, medical applications, industrial uses, astronomy and study of the external fringes of the knowledge of the human. Follow the QS ranking as our starting point, we set the Ranking the ranking for physics programs produced by Academicinfluence.com. Using the learning of the machine and the search algorithms to characterize the academic influence on the web, Academicinfluence.com avoids human injury that infects most of the academic rankings. The rankings discovered by Academicinfluencp.com are based on the influences of faculty and alum publications, quotes, quotes, References associated with a school, degree programs, departments or discipline. This ranking for the influenza approach elevates a school or graduation program based on which members of his academic community are objectively influential in a given discipline. Weigh the ranking of the programmatic world QS and the ranking of academic influenza, not only have we created a unique ranking of the first 50 physics programs, but we reveal because every university physics program appears where it does.
