Make the launch of your app a success with tools and strategies to help you publish, manage and distribute your app around the world Discover how ³ CC0/Ingo Joseph/Pixabay YouÄe Ä finally done. has Ä the transition ³ to the Google Play Store. Getting used to a new system is excitingÄ Ä and sometimes challengingÄ as you learn ³ where to find what you need. Fortunately, once you master the download process, Ä be filling your smartphone or tablet with all your favorite apps.Locate the app ³ Google Play Store To find the Google Play store on your device, go to the apps section ³ your device. In some cases, Ä as easy as swiping up from the bottom of the screen. If your device doesn't have this as an option³ find the triAngle-shaped icon in your apps. ³ it to open the Google Play store directly on the device. You need a Gmail account to use this service. The app will ³ link to your unique email account, making it easy to back up your apps, photos, scans and other files to Google's cloud storage system. This is particularly useful if are someone who enjoys getting the newest devices. You can log ³ into your Google account and access your previously downloaded apps and saved files.There are several ways to find apps to install on your device. You can search for apps by name or type or try an app ³ the store suggests. If you know the name of the app ³ you' looking forÄ Ä like Twitter, Spotify or your bankÄ Ä type the name in the search bar at the top of the screen. Choose the application ³ you want from the list.If you looking for a general type of application³ such as Messaging app, type hmm phrase in the search box. Google Play will give you a list of different applications that are labeled to match your search criteria. When you see one that you think you are interested in, click to download the application. Google sometimes offers you suggestions for applications thatYOU LIKE IT. You can review them by tapping on them to download. Install the apps after clicking the button to select the app. Google Play displays your information about the app, including its creator, tags that relate to other users. And a green button that says "oöInstall". Press that button, and the device is automatically downloaded and installed, as long as storage space is available. How to update your apps You need to keep your installed apps up to date. From time to time, developers send notifications when they have updated their apps. These updates range from fixing bugs in the way the app works to adding new features. Some apps update on their own, but others require your permission to be completed. Keeping up with these updates ensures that you always have the latest version of the app that the developer supports. To find out if your downloaded apps have updates, open their Google Play store. Click on the three lines in the upper left corner of the screen and locate the "My Apps & Games" section. You'll see three tabs. The first tab takes you to a list of your apps sorted by 'oeRecontally updated' and 'pending attachments'. From here, you can update all your apps or choose which apps will be updated individually. How to get to Uninstall apps Sometimes, you accidentally download an app that you don't really want or need or want to delete a space on your device. When this happens, you need to know how to uninstall the apps you have downloaded. On many phones, you can do it directly on the phone interface without entering the Play. If you prefer to do it in the Google Play store, open it up. Locate the application ³ using the search bar at the top of the screen. Touch the app ³ and look for the ³ to uninstall it. You will need to confirm this step to indicate that you really want to uninstall the application ³. Don't worry, though. You can download it again in the future if you need it. More S FROM QUESTIONSANSWERED.NET Published by Krish Vitaldevara, Director, Product Management³ We know that a lot of feeling safe online is having control over your data. That's why we are each committed to empowering users with advanced security and privacy controls and increased agency regarding data practices. With the new data security ³, developers will now have a transparent way to show users if they collect, share, and protect user data, before users install an ³ application. Starting today, we will configure the data security form in Google Play Console. We have also listened to your feedback, so to provide developers with additional guidance³ we are sharing useful information ³ our Help Center, developer guide, Play Academy course, and more. Following our common protocols, we will start rolling out progressively today and hope to expand access to all within a couple of weeks. How ³ send your app information ³ Play Console Starting today, you can go to App content in your Play Console and search for a new section ³ a called Data Security. We recommend that you check the guÄa and submit your form early so that you can get review feedback ³ make changes before rejected forms prevent you from publishing new app ³. Developers have told us that early feedback ³ help them fill out the form correctly before users saw the data security section ³ February 2022. Application ³ applications without approved forms begins April 22. We understand that filling out the form may require an amount work, so we build the product and schedule based on the feedback of the developer to make this process as rationalized as possible. In addition, developers have asked for a way to import more easily information when they have multiple applications. Therefore, we have added an option for developers to import afüe. how to prepare what users will see on the store list of their app from February first users will see the data security summary on the list of their store. your application profile will show which data is collected by an application or actions and highlight the security details, as if: the application has security practices, such as data encryption in transit, the application is committed to following our family policy, the application has been independently revised with a global security standard you can access to the summary to see more details such as: what type of data is collected and shared, such as location, contacts, personal information (e.g. used, such as app functionality, customization and more if data collection is optional or necessary to hear an application that users have shared to view this information helps them understand how some applications can handle your information and feel more confident about certain applications. what to expect dates from the timeline subject to change, you can send your data security form on the playback console now for early review comments. you are not required to send an update of the application to send your security profile. In February 2022, we will launch this feature at the game store. if your information is approved, your store list will be automatically updated with your data security information. if your information has not been sent or has been rejected, users will see "no information available." by April 2022, all so applications must have their approved data security section.We want so many applications to be ready for the February 2022 consumer experience, we know that some developers will need more time to evaluate their applications and coordinate with several teams. Also by April, all applications should also provide a privacy policy. Previously, only applications that collected staff and andUser data needed to share a Privacy Policy. Without an approved section or a privacy policy, the new applications or application updates can be rejected. Non-conforming applications can be confronted additional actions of application in the future. Thank you for your continuous collaboration in the construction of this function along with us and in doing Google Play a safe and reliable platform for all. everybody. The official site for Android app developers. Provides tools, training, and documentation. When you upload an app bundle or APK, it needs to meet Google Play's target API level requirements. By August 2021, new apps must target at least Android 11 (API level 30). By November 2021, all apps that are being updated must target at least Android 11 (API level 30). Until then, new apps and app updates must target at least Android 10 (API ...
