(16.9 MB) 2nd Edition: Reviewed by Kalina Manoylov, Allison Rick VandeVoort, Christine Mutiti, Samuel Mutiti, and Donna Bennett in 2017. Authors³: This course uses the basic principles of biology and earth science as a context for understanding environmental policies and resource management practices. Our planet faces unprecedented environmental challenges, from oil spills³ global climate change. In ENSC 1000, learn about the science behind these problems; prepare them to make an³ and invaluable contribution to the future of Å Earth Å. I hope that each of you will commit to the material presented and participate fully in the search,³ and sharing of information³ our class. The Environmental Science Laboratory (ENSC 1000L) is a separate class and you will receive a separate³ for that course. Course Objectives After completing this course, you can: Evaluate the diverse responses of peoples, groups and cultures to environmental issues, themes and themes. To use³ observation and analysis to predict the results associated with environmental modifications. Demonstrate knowledge of the causes and consequences of climate change. Apply quantitative skills to solve environmental science problems. Demonstrate knowledge of environmental law and policy. Design and evaluate the experiments. Interpret the data in figures and figures. This open textbook for Introduction³ Environmental Science was created under a Round Two ALG Textbook of Subsidy Transformation³ n. The laboratory manual was made to be used with the remixed textbook MicrobiologyÅa for allied health students, and the textbook has a set of instructional materials³ n. Description³ the authors: This lab manual was created to support a microbiology course for allied health students. The first section³ the manual was adapted from the MicrobiologÅa OpenStax textbook, which uses a remixed version, MicrobiologÅ³ for Allied Health Students, as the text for the course. The following section³ n, mÅ© all de tinciÅ³ n, covers three essential³ procedures used in any microbiology laboratory. The manual concludes with descriptions of the main biochemical tests that students must perform to identify an unknown microorganism. Although many traditional lab manuals are long and comprehensive, the descriptions of the labs in this manual remain the most recent to encourage students to further investigate the procedures and results on their own. The index includes a security contract that each student must sign and present to the instructor at the beginning of the semester. This manual was created in partial fulfillment of a scholarship from the University System of Georgia Å the Affordable Learning Initiative of the Transformation³ the Georgia Textbook. A special thanks to Sara Selby for the³ and the photo.
