A file with the .webm file extension is a video webm file. It is based on the same video format that uses the MKV file extension. WebM files are supported by most web browsers as the format is sometimes used on HTML5 websites for video streaming. For example, in most browsers, YouTube uses the webm video file format for all its videos, from 360p to really high resolutions. So do Wikimedia and Skype. You can open a WebM file with most modern browsers, like Google Chrome, Opera, Firefox, and Edge. If you want to play WebM files in the Safari web browser on a Mac, you can do it via VLC with the VLC for the Mac OS X plugin. If your web browser is not opening the WebM file, make sure it is completely updated. WebM support was included starting from Chrome 6, Opera 10.60, Firefox 4 and Internet Explorer 9 (with WebM for the IE plugin). The WebM video file format is also supported by Windows Media Player (the Directshow filters are also installed), MPlayer, Kmpayer and Miro. If you are on a Mac, you can use most of the same programs supported by Windows to play the WebM file, as well as the free Elmedia player. Devices in à €
