You cannot perform the specified action at this moment. To utilize the script, you need to extract the content of the provided ``.7z`` file using a third-party archive manager such as ``7-Zip``. This update includes bug fixes, enhancements, and new features. The Enterprise Edition activation issue has been resolved, and the ticket generation and application process have been updated. A project mirror is now available on GitHub for easier access to the script's files. Minor improvements have been made to enhance overall performance. Downloads are available in three formats: 1. Password-protected ``.7z`` archive file: MAS 1.3 Password 1234.7z * Requires a third-party archive manager to open 2. Self-extracting ``.cmd`` file: Extract MAS 1.3.cmd * No Zone markers or smart screen intervention issues 3. Compressed ``.zip`` file: MAS 1.3 Password 1234.zip * Less secure, but does not require a third-party archive manager WindowsAddict has been updated with fixes for the Edition ID mismatch issue and non-English character support. The script now supports ARM64 systems, thanks to contributions from various users. Other notable changes include: * Updating the script to ``KMS VL ALL v37f`` by @abbodi1406 * Adding official Microsoft ``.exe`` files for retail-to-volume conversion * Optimizing file and folder structure * Updating KMS server list * Improving offline ReadMe files availability The tool is now available on GitLab, and downloads can be found in the provided formats. **Download KMS Tools** A free toolset called KMS Tools Portable (version 08.03.2025) is available for download from Intercambiosvirtuales.org.
